

Photon-number resolution with Transition-Edge Sensors

Friday, 7 February 2025 10:30 (15 minutes)

Project STAR develops TiAu TES single-photon detectors with photon-number resolution, with the goal to achieve >90% detection efficiency and 1 ns response time. Results on TESs with gold banks and antireflection coatings are presented

Presenter: MALNATI, Federico (INRIM)

Session Classification: Workshop tematici

Track Classification: A6.4 Hybrids
